

Q1. Is it necessary to combine SEEMP Part I and SEEMP Part II or separate plans are acceptable?

A1. SEEMP Part II can be either prepared independently or along with SEEMP Part I. If you have prepared separately, just submit SEEMP Part II for our review. However, for Japanese flag vessels approval of both SEEMP I and SEEMP II are needed and please submit both if SEEMP I is not yet approved by the administration/RO.

Q2. Is it possible to verify SEEMP II and conduct annual data verification of ships other than NK Class?

A2. Basically it is possible to review SEEMP II of other class registered vessels. However some flag state has not allowed and some flag states require written agreement from the classification society of the vessel if the review is carried out by classification society other than ships' classification.

Q3. How the reporting data will be handled if within a calendar year there is a change in Management Company of the ship or the flag of the vessel?

A3. At the time of management/flag change (or close to that date) it is required to prepare the fuel oil consumption data and submit to the administration/flag state for the time period under a flag state or Management Company.
