NOTE

- ※1. If there is a direct access to an escape way from the workshop, an EEBD is not required.
- ※2. It should be decided for each ship, taking into consideration various factors.
- ※3. If a machinery space contains an enclosed primary escape trunk having a door at each level, only one EEBD need be located on each level.
- ※4. i) Where the engine control room is located adjacent to the work shop, either device may be omitted.
ii) Where the engine control room and/or the workshop is located adjacent to an escape route from the engine room, the device for such control room and/or workshop may be omitted.
iii) At least three EEBDs are to be provided.
- ※5. EEBDs should be made available for individual carriage for the maximum number of persons who may enter the pump room during such operations. Ships may opt to install EEBDs in the pump room in lieu of providing additional EEBDs for individual carriage. If this option is chosen a minimum of two EEBDs should be installed in the pump room.
- ※6. Ships with ten or less EEBDs on board shall carry at least one spare device. Ships with 11 to 20 EEBDs on board shall carry at least two spare devices. Ships with more than 20 EEBDs on board shall carry spares equal to at least 10% of the total EEBDs but no more than 4 spares will be required.
- ※7. A minimum of two fully functional spares are to be provided – one for accommodation spaces and another for engine room.
- ※8. It must be marked as “training” in any case.
- ※9. If onboard means of recharging breathing apparatus cylinders is provided, no additional training cylinder will be necessary.
- ※10. It should be stowed away from operational EEBDs
