

# **Report Forms for the Test Procedures for Coating Qualification and Crossover Tests**

## **Amended Rules**

Rules for Approval of Manufacturers and Service Suppliers

## **Reason for Amendment**

IACS, in order to reflect the IMO Performance Standard for Protective Coatings for dedicated seawater ballast tanks in all types of ships and double-side skin spaces of bulk carriers (Resolution MSC.215(82)), specified requirements regarding the approval of firms engaged in the testing of coating systems in Unified Requirements Z17.

However, because report forms for the test procedures for coating qualification and crossover tests were not provided, IACS, in June 2008, adopted Unified Requirements Z17(Rev.8) which created model report forms (Recommendation 101 and 102) and standardized the format to be used by firms engaged in the testing of coating systems.

This amendment has been introduced in order to incorporate the requirements regarding IACS Unified Requirements Z17 (Rev.8), Rec.101 and 102 into the Rules.

## **Outline of Amendment**

Report forms for the test procedures for coating qualification and crossover tests have been added.
