

The Survey Requirements for Shell Doors and Inner Doors of Ro-Ro Ships and Car Carriers

Amended Rules and Guidance

Rules for the Survey and Construction of Steel Ships Part B
Guidance for the Survey and Construction of Steel Ships Part B

Reason for Amendment

IACS Unified Requirements (UR) Z7 specifies requirements for the hull surveys of cargo ships in service. In this UR, however, no survey requirements for the bow doors, inner doors, side shell doors and stern doors installed on ro-ro ships and car carriers are specified.

Therefore, IACS established a new unified requirement, IACS UR Z24, so that the survey of bow doors, inner doors, side shell doors and stern doors installed on ro-ro ships and car carriers would be conducted in the same way by all IACS members.

Accordingly, all relevant requirements have been amended in accordance with the requirements of IACS UR Z24.

Outline of Amendment

Survey requirements for the bow doors, inner doors, side shell doors and stern doors installed on ro-ro ships and car carriers have been specified.
