

Application, Classes, Tests, etc. for Pipes

Object of Amendment

Rules for the Survey and Construction of Steel Ships Part D
Rules for the Survey and Construction of Inland Waterway Ships
Guidance for the Survey and Construction of Steel Ships Part D
Guidance for the Approval and Type Approval of Materials and Equipment for Marine Use

Reason for Amendment

The IACS Unified Requirement (UR) P2 series, which stipulates requirements for the design, construction and tests of pipes, was developed in 1981, and it has already been incorporated into the ClassNK Rules.

IACS, however, recently comprehensively reviewed the UR for the purpose of the clarification and reflecting requests from the industry members. In addition, the requirements for mechanical joints were reviewed again. As a result of its review, IACS adopted UR P2.1(Rev.3), UR P2.2(Rev.5), UR P2.7.3(Rev.3), UR P2.7.4(Rev.11), UR P2.9(Rev.3) and P2.11(Rev.6) in October 2023.

Accordingly, relevant requirements are amended based on the aforementioned revisions to the UR P2 series.

Outline of the Amendment

The main contents of this amendment are as follows.

- (1) Adds “urea for SCR systems” as a type of medium to Table D12.1, Part D of the Rules for the Survey and Construction of Steel Ships.
- (2) Clarifies that pressure pulsation tests carried out during approval tests are mandatory for Group I and Group II pipes, but are only required for Group III pipes in cases where pressure pulsation other than water hammer is expected.
- (3) Clarifies the acceptable diameters for threaded joints of the small diameter pipes conveying flammable media used for instrumentation are only outside diameters of 25 *mm* or less.

Effective Date and Application

- (1) Part D of the Rules for the Survey and Construction of Steel Ships (12.1.1, 12.1.3 and 21.2.1) and Part 7 of the Rules for the Survey and Construction of Inland Waterway Ships (10.1.1 and Table 7.10.1)
This amendment applies to ships for which the date of contract for construction is on or after 1 January 2025.
- (2) Part D of the Rules for the Survey and Construction of Steel Ships (12.3.3 and Table D12.9), Rules for the Survey and Construction of Inland Waterway Ships (Table 7.10.9) and Part 6 of the Guidance for the Approval and Type Approval of Materials and Equipment for Marine Use (Table 6.9-1)

This amendment applies to the following mechanical joints:

- (a) those for which the application for approval of use is submitted to the Society on or after 1 January 2025; and
 - (b) those for which the application for renewal of approval of use is submitted to the Society on or after 1 January 2025.
- (3) Part D of the Rules for the Survey and Construction of Steel Ships (12.4.2), Part 7 of the Rules for the Survey and Construction of Inland Waterway Ships (10.4.2) and Part D of the Guidance for the Survey and Construction of Steel Ships (D12.4.2)
This amendment applies to threaded joints for which the application for approval is submitted to the Society on or after 1 January 2025.
- (4) Part D of the Rules for the Survey and Construction of Steel Ships (12.6.2, 13.17.2 and 14.6.2) and Part 7 of the Rules for the Survey and Construction of Inland Waterway Ships (11.16.2)
Effective date of the amendments is 1 January 2025.
- (5) Part 6 of the Guidance for the Approval and Type Approval of Materials and Equipment for Marine Use (6.9.1)
This amendment applies to the following plastic piping systems on or after 1 January 2025:
- (a) those for which the application for approval of use is submitted to the Society on or after 1 July 2023;
 - (b) those for which the application for renewal of approval of use is submitted to the Society on or after 1 July 2023; and
 - (c) those used on ships for which the date of contract for construction is on or after 1 July 2023.

An asterisk (*) after the title of a requirement indicates that there is also relevant information in the corresponding Guidance.

ID: DD24-03
