

Review of the Scope of Preventive Machinery Maintenance Systems

Object of Amendment

Rules for Preventive Machinery Maintenance Systems

Reason for Amendment

The Rules for Preventive Machinery Maintenance Systems (hereinafter referred to as the “Rules”) was established in 1995 to specify requirements related to assigning the installations character “PMM” to ships that conduct condition monitoring and maintenance. The Rules stipulates that condition monitoring and diagnostic systems be organically integrated with preventive maintenance management systems for the preventive maintenance of machinery. The Rules was developed not only in consideration of the technology prevalent at the time but also in consideration of technological progress expected in the near future; moreover, the Rules assumes preventive maintenance plans will be automatically updated based on information obtained from condition monitoring and diagnosis results.

In common practice, though, the condition monitoring and diagnostic systems used with preventive maintenance systems are often developed separately and independently of said maintenance systems, and they are not necessarily organically integrated. For this reason, the Society decided to review the Rules and amend relevant requirements accordingly.

Outline of the Amendment

Revise relevant requirements to remove wording specifying condition monitoring and diagnostic systems are to be organically integrated with preventive maintenance management systems.

Effective Date and application

Effective date of this amendment is 1 July 2025.

An asterisk (*) after the title of a requirement indicates that there is also relevant information in the corresponding Guidance.
