

# Flanged Joints and Expansion Bends of Cargo Oil Piping and Ballast Piping

## Object of Amendment

Rules for the Survey and Construction of Steel Ships Part D  
Guidance for the Survey and Construction of Steel Ships Part D

## Reason for Amendment

IACS Unified Requirement (UR) F15 specifies requirements for cargo piping passing through ballast tanks and ballast piping passing through cargo tanks, as permitted by Regulation 19.3.6 of MARPOL Annex I. These requirements have already been incorporated into the NK Rules.

Recently, IACS clarified the terms used in this UR and adopted UR F15(Rev.7) in September 2023.

Accordingly, relevant requirements are amended based upon UR F15(Rev.7).

## Outline of the Amendment

Adds definitions for “flanged joints which have no risk of leakage” and “expansion bends” to Chapter 14, Part D of the Rules for the Survey and Construction of Steel Ships.

## Effective Date and Application

This draft amendment applies to ships for which the date of contract for construction is on or after 1 January 2025.

An asterisk (\*) after the title of a requirement indicates that there is also relevant information in the corresponding Guidance.

ID: DD24-09

<b>EFFECTIVE DATE AND APPLICATION</b>		
<p>1. The effective date of the amendments is 1 January 2025.</p> <p>2. Notwithstanding the amendments to the Rules, the current requirements apply to ships for which the date of contract for construction* is before the effective date.</p> <p>* “contract for construction” is defined in the latest version of IACS Procedural Requirement (PR) No.29.</p> <p style="text-align: center;">IACS PR No.29 (Rev.0, July 2009)</p> <p>1. The date of “contract for construction” of a vessel is the date on which the contract to build the vessel is signed between the prospective owner and the shipbuilder. This date and the construction numbers (i.e. hull numbers) of all the vessels included in the contract are to be declared to the classification society by the party applying for the assignment of class to a newbuilding.</p> <p>2. The date of “contract for construction” of a series of vessels, including specified optional vessels for which the option is ultimately exercised, is the date on which the contract to build the series is signed between the prospective owner and the shipbuilder. For the purpose of this Procedural Requirement, vessels built under a single contract for construction are considered a “series of vessels” if they are built to the same approved plans for classification purposes. However, vessels within a series may have design alterations from the original design provided:</p> <p>(1) such alterations do not affect matters related to classification, or</p> <p>(2) If the alterations are subject to classification requirements, these alterations are to comply with the classification requirements in effect on the date on which the alterations are contracted between the prospective owner and the shipbuilder or, in the absence of the alteration contract, comply with the classification requirements in effect on the date on which the alterations are submitted to the Society for approval.</p> <p>The optional vessels will be considered part of the same series of vessels if the option is exercised not later than 1 year after the contract to build the series was signed.</p> <p>3. If a contract for construction is later amended to include additional vessels or additional options, the date of “contract for construction” for such vessels is the date on which the amendment to the contract, is signed between the prospective owner and the shipbuilder. The amendment to the contract is to be considered as a “new contract” to which 1. and 2. above apply.</p> <p>4. If a contract for construction is amended to change the ship type, the date of “contract for construction” of this modified vessel, or vessels, is the date on which revised contract or new contract is signed between the Owner, or Owners, and the shipbuilder.</p> <p>Note: This Procedural Requirement applies from 1 July 2009.</p>
