

Rudder Horns and Rudders

Object of Amendment

Rules for the Survey and Construction of Steel Ships Part C
Guidance for the Survey and Construction of Steel Ships Parts C and CS
Guidance for the Survey and Construction of Inland Waterway Ships

Reason for Amendment

IACS Unified Requirement (UR) S10 stipulates requirements for rudders, sole pieces and rudder horns, and these requirements have already been incorporated into Part C, Part CS and other parts of the NK Rules.

IACS recently reviewed certain requirements of the UR and amended requirement related to rudder horns and rudder trunks as a result. The amended requirements were then adopted as UR S10 (Rev.8) in September 2025.

Accordingly, relevant requirements are amended based on UR S10 (Rev.8).

Outline of the Amendment

The main details of this amendment are as follows:

- (1) Amends the calculation method for the sectional areas of rudder horns used in the formulae for evaluating the torsional stress acting on each section and for determining the torsional stiffness factor of the rudder horns.
- (2) Amends the reference waterline used for the installation positions of sealing devices on rudder carriers.
- (3) Amends various figures and symbols for clarification purposes.

Effective Date and Application

This amendment applies to ships for which the date of contract for construction is on or after 1 January 2027. This includes those ships to which Part C of the Rules for the Survey and Construction of Steel Ships applied prior to its comprehensive revision.

An asterisk (*) after the title of a requirement indicates that there is also relevant information in the corresponding Guidance.

ID:DH25-14

Amended-Original Requirements Comparison Table (Rudder Horns and Rudders)

Amended	Original	Remarks
Fig. CS3.4.1-4 Type C Rudder with Rudder Trunk Supporting Rudder Stock (Pressure Applied on the Entire Rudder Area)		Amendment (3) Harmonize the figure with UR S10 Annex S10.3
 <p>The diagram illustrates the structural analysis of a Type C rudder. It consists of three main parts: a 'Model' section on the left showing the rudder's geometry with areas A_1 and A_2, and lengths ℓ_{40}, ℓ_{20}, ℓ_{15}, and ℓ_{10}; a 'Shear force' section in the middle showing the distribution of shear force F_R along the rudder stock and rudder; and a 'Bending moment' section on the right showing the distribution of bending moments M_b, M_{FR1}, M_c, M_R, and M_{FR2}. The rudder stock is supported by a rudder trunk, and the rudder is attached to the stock. A coordinate system with Z (vertical), Y (horizontal), and X (diagonal) axes is shown at the bottom left.</p>

<p align="center">EFFECTIVE DATE AND APPLICATION</p> <ol style="list-style-type: none"> The effective date of the amendments is 1 January 2027. Notwithstanding the amendments, the current requirements apply to ships for which the date of contract for construction* is before the effective date. For ships subject to Part C of the Rules for the Survey and Construction of Steel Ships and the Guidance for the Survey and Construction of Steel Ships prior to its comprehensive revision by Rule No.62 on 1 July 2022 and Notice No.47 on 1 July 2022 (herein after referred to as “old Part C of the Rules” and “old Part C of the Guidance”), and which the date of contract for construction* is on and after the effective date, this amendment also applies to following requirements. <p>C2.2.5, old Part C of the Guidance Fig. C2.2.5-1, old Part C of the Guidance Fig. C2.2.5-2, old Part C of the Guidance C3.4.1-1, old Part C of the Guidance C3.4.1-3, old Part C of the Guidance C3.4.1-4, old Part C of the Guidance Fig. C3.4.1-6, old Part C of the Guidance Fig. C3.4.1-7, old Part C of the Guidance Fig. C3.4.1-8, old Part C of the Guidance C3.11.1-3, old Part C of the Guidance</p>		

Amended-Original Requirements Comparison Table (Rudder Horns and Rudders)

Amended	Original	Remarks
<p>* “contract for construction” is defined in the latest version of IACS Procedural Requirement (PR) No.29.</p> <p style="text-align: center;">IACS PR No.29 (Rev.0, July 2009)</p> <ol style="list-style-type: none"> 1. The date of “contract for construction” of a vessel is the date on which the contract to build the vessel is signed between the prospective owner and the shipbuilder. This date and the construction numbers (i.e. hull numbers) of all the vessels included in the contract are to be declared to the classification society by the party applying for the assignment of class to a newbuilding. 2. The date of “contract for construction” of a series of vessels, including specified optional vessels for which the option is ultimately exercised, is the date on which the contract to build the series is signed between the prospective owner and the shipbuilder. For the purpose of this Procedural Requirement, vessels built under a single contract for construction are considered a “series of vessels” if they are built to the same approved plans for classification purposes. However, vessels within a series may have design alterations from the original design provided: <ol style="list-style-type: none"> (1) such alterations do not affect matters related to classification, or (2) If the alterations are subject to classification requirements, these alterations are to comply with the classification requirements in effect on the date on which the alterations are contracted between the prospective owner and the shipbuilder or, in the absence of the alteration contract, comply with the classification requirements in effect on the date on which the alterations are submitted to the Society for approval. The optional vessels will be considered part of the same series of vessels if the option is exercised not later than 1 year after the contract to build the series was signed. 3. If a contract for construction is later amended to include additional vessels or additional options, the date of “contract for construction” for such vessels is the date on which the amendment to the contract, is signed between the prospective owner and the shipbuilder. The amendment to the contract is to be considered as a “new contract” to which 1. and 2. above apply. 4. If a contract for construction is amended to change the ship type, the date of “contract for construction” of this modified vessel, or vessels, is the date on which revised contract or new contract is signed between the Owner, or Owners, and the shipbuilder. <p>Note: This Procedural Requirement applies from 1 July 2009.</p>
